INFORMATION

Learning to read is the foundation of children's early years education, it is essential in supporting learning throughout a child's education and improves employment prospects in later life.

This research has investigated how children are taught to read, and the methods used to assess reading. Working with teachers and education professionals an Augmented Reality App has been developed which targets the areas covered by the UK Government Phonics programme.

The Magic Spell Phonics app works with this booklet containing images, it works by recognising images in the booklet. The booklet is free. A pdf of the booklet can be downloaded from:
